## STATE OF OHIO WATER CONSERVATION AND EFFICIENCY PROGRAM ANNUAL ASSESSMENT

December 13, 2024

This Water Conservation and Efficiency Program Annual Assessment is submitted by the State of Ohio to the Compact Council pursuant to the requirements contained in Section 4.2.2 of the Great Lakes-St. Lawrence River Basin Water Resources Compact ("the Compact") and to the Regional Body pursuant to the commitments made in Article 304 of the Great Lakes-St. Lawrence River Basin Sustainable Water Resources Agreement ("the Agreement").

- **1. Lead Agency.** The lead agency for Ohio's water conservation and efficiency program is the Ohio Department of Natural Resources ("ODNR"). The primary contact person is Dena Barnhouse, Chief of the ODNR Division of Water Resources ("the Division") (telephone: 614-265-6723, email: Dena.Barnhouse@dnr.ohio.gov). An additional contact person is Bradley Lodge, Manager of the Division's Water Inventory and Planning Program (telephone: 614-265-6727, email: Bradley.Lodge@dnr.ohio.gov).
- **2. Status of Ohio Goals and Objectives.** Ohio's water conservation and efficiency goals are those contained in Section 4.2.1 of the Compact. Ohio's water conservation and efficiency objectives have been developed and can be viewed online at the Water Inventory & Planning Program's Great Lakes Compact webpage in the Water Conservation & Efficiency Program section (link).
- **3. Water Conservation and Efficiency Program Overview.** Ohio's implementing laws, regulations and policies are contained in the Compact, codified in Ohio Revised Code ("ORC") 1522.01, and its implementing provisions codified in ORC 1522.02–.40. ORC 1522.05 requires the Chief of the Division to adopt voluntary watershed-wide goals, objectives, and standards for water conservation and efficiency consistent with Section 4.2 of the Compact. ORC 1522.17 requires an applicant for a water withdrawal and consumptive use permit to submit a facility water conservation plan that, if it reasonably incorporates environmentally sound and economically feasible water conservation measures applicable to the facility, will be considered to be in compliance with Section 4.11.3 of the Compact.

All other elements of Ohio's water conservation and efficiency program are voluntary, except those authorized by pre-existing statutes, regulations, or programs. The only state program that provides for mandatory water use reductions is the Ohio Emergency Management Agency's Emergency Operations Plan (authorized by ORC 5502.22), and only when the Governor declares a Level Four Drought Emergency. The elements of Ohio's voluntary program consist of education on the value of water conservation and efficiency and promotion of voluntary conservation activities. Such efforts are undertaken individually by state agencies pursuant to general education authorities and programs.

4. Consistency with Regional Objectives

Objective	n Regional Objectives Program Element
Guide programs toward long-term sustainable water use	The Water Inventory and Planning Program Visibility Outreach Initiative continues its campaign to raise awareness about Ohio's water use rules and regulations. Program staff are presenting at various agencies, advisory councils, and conservation districts to inform water users on the requirements of the ORC. The Initiative will improve the accuracy of Ohio's water use data and aid in preventing potential water use conflicts.
	ODNR continued its ConServe Ohio State Park Sustainability Plan which is a call to action for park staff and visitors to implement sustainability practices across ODNR owned properties. Water conservation, including water use tracking, mitigation techniques, and updated infrastructure, is a key component of this plan. Water sector specific drought guidance was provided to all 2100+ active registered water users in the state. Information included industry specific drought preparedness, resources for those experiencing interruption in supply, and recommended water conservation and efficiency practices to decrease impacts on other users. Additionally, press releases with similar information were provided to all major news stations in Ohio.  ODNR partnered with the Ohio Environmental Protection Agency (OPEA) to complete a comprehensive 15-county water study in the central Ohio region. This regional study will examine water availability and demand, project future demand, provide regionalization recommendations, explore water reuse opportunities, and
	aid in siting locations for high-capacity users. The project will be completed in February 2025.
Adopt and implement supply and demand management to promote efficient use and conservation of water resources	ODNR continues to expand the Water Withdrawal Atlas on ODNR's Webpage: The Atlas concisely summarizes data collected by ODNR to assist in answering commonly asked questions regarding water use and to promote conservation focused initiatives by providing a clearer understanding of how water is used in Ohio. Understanding these factors can inform conservation solutions for the entire state as well as localized initiatives that support communities and watersheds. The Atlas now includes a Lake Erie Basin-specific page detailing large-scale water use throughout the Lake Erie Watershed.
Improve monitoring and standardize data reporting among state and provincial water conservation and efficiency programs	Annual water use information for registered withdrawals continues to be collected, analyzed, and reported for the various water use sectors.  A new online water-use reporting application rolled out in 2023 allowing registered facilities easy access to their reporting history and furthered the water user's ability to track their own water conservation practices. Accuracy of registrations and annual reporting has increased exponentially and is expected to continue.  1,575 of the 2,100 active registered facilities are now signed up and currently reporting online.  The Water Withdrawal Facility Locator Application is now complete and will allow for any interested party to access all water withdrawal data dating back to 1990. The full roll out of the Application is set for January 2025 which will include video tutorials and user guides.
Develop science, technology, and research	ODNR's Groundwater Program is completing a nearly three-year project to create new, seamless, statewide maps and datasets for Ohio of both anticipated aquifer yield and hydraulic conductivity. The new maps will contain information about primary and secondary aquifer designations, the hydraulic conductivity of the primary aquifer, primary and secondary aquifer yield in gallons per minute, and information about the relative position of the primary to secondary aquifer, when present. These maps are the result of extensive data collection, compilation, and interpretation, much of which was not available when these parameters were last evaluated. This project was partially funded by the Ohio Water Development

**5. Program Implementation Timeline and Status.** Ohio's Water Conservation and Efficiency Program, continues to be implemented as described above.
